Citizen(dual national status-born in England, American citizenship papers dated for the year 1984)

(I actually developed the invention and schematics in September of 2003. I mailed myself a letter with my notations and schematics to prove when I came up with the idea. If you need the original letter,it can and will be provided to you. The actual date was in June; I mailed it in September.)

This invention is an actual learning cd-rom designed to help the children of elementary school age achieve the appropriate scoring levels on their standardized tests. The subject area would be that of mathematics and reading. Since both are required for each

grade level, I believe it would be beneficial to entertain both subject criteria.

A computer program must be produced in order to facilitate a project of this magnitude. It is imperative that one understands written permission from the Department of Education is required in order to perform such a task.

Through extensive research, I have come to the conclusion that students are not performing well on these tests; some 50%+ in each grade level.

Since there is no learning cd of this nature on the market today, I embark on a mission to create a learning apparatus like no other. Once implemented into the mainstream educational system, students will never look at taking the standardized tests the same way again.

I have no doubt in my mind that there are other compact disks out there which are designed to help; but none directly for the students. What I provide is a test taking format, which includes such factors as helping with test anxiety. I am providing the children with two essentials; what they want, coupled with what they need.

By providing a similar testing environment to that of the classroom, along with

accompanying distractions(at certain levels) and other various factors, this is as complete a tool as one can get.

The PLUS! Icon factors in as a preparer for the years subject requirements. Since the standardized tests are based on the syllabus of that particular subject, it would be an excellent preparation tool for the child during the summer months. It gives you prior knowledge of what to expect once the child enters the new grade.

Drawings

Several drawings will accompany the detailed description of the invention.They will be in numbered sequence . Please refer to the drawings when prompted in the full description.

Detailed Description of the Invention

Beginning on the next page

If tweaked just right, while being used as a basic template,this can become a junior high and high school learning apparatus. Subject criteria such as

Science, History, Foreign Languages and preparation for the Regents and SAT's widen this CD's possibilities. College level courses can also be implemented if done just right; infinite possibilities can arise!
